

HORIZON C.O.M

Horizon C.O.M is an extension of Horizon: using the same database and analytics capabilities, Horizon C.O.M outputs the data from the Horizon database into any Financial application.

Horizon C.O.M:

- Gives you the ability to input our highly respected database into your analysis environment.
- Enables you to use the Horizon data in you Value at Risk models, for Stress testing and many other applications.

Horizon C.O.M can be used with applications such as Matlab and Excel, using programming languages such as C++ and Visual Basic.

With Horizon C.O.M. you can:

- Analyse data in any environment using your own routines,
- Create variance/covariance tables to use with your own VAR analysis,
- Procure a daily Mark-to-Market portfolio of transactions,
- Obtain historical deal valuations.

Horizon C.O.M. gives you greater power to make informed trading decisions.
